

KIT Includes INSTRUCTIONS on following page.

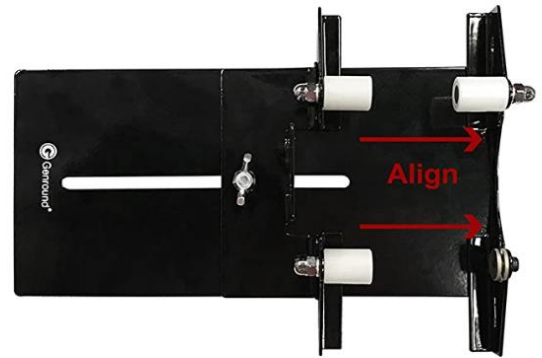

How to Loosen/Tighten the Screw

- ①. Hold the Square nut that is back against the hex hole when you turn the hex key.
- ②. Rotate the hex key away from you to tighten the screw.
- ③. Rotate the hex key towards you to loosen the screw.

Adjust the Cutter to the Right Position

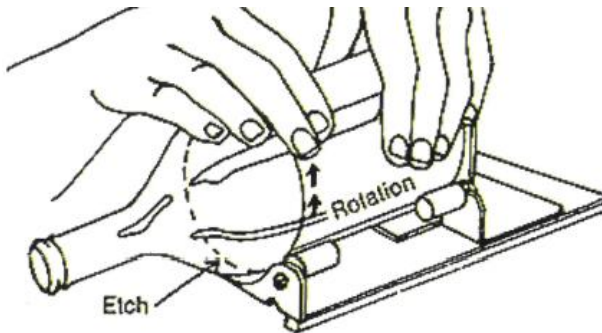

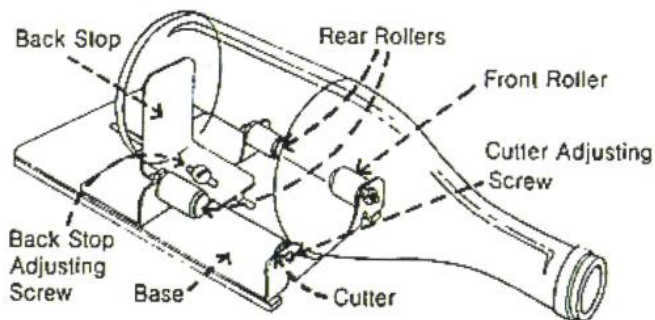

- ①. Adjust to the Length you want to cut.
- ②. Adjust the Rear Wheel. Loosen the screw, put the bottle on the cutter and correct the distance between two wheels. Take down the bottle and fix the screw.
- ③. Adjust the Front Wheel and Blade. Align the front wheel and blade with the rear wheel horizontally.

HOW TO CUT A GLASS BOTTLE

STEP ONE: ADJUST THE MACHINE

Decide where you want to cut the bottle by loosening the screw and moving the backstop forward for a shorter cut and backwards for a longer cut.

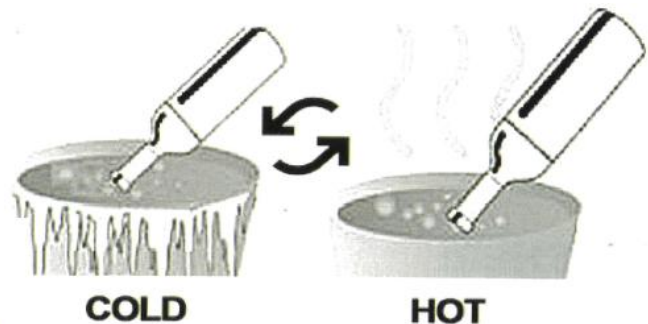

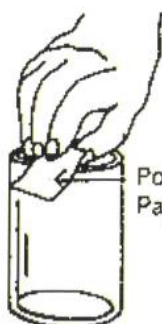

STEP TWO: CUT A LINE

This is exactly the same as making a score line when glass cutting.

- Rotate the bottle towards you with two hands (see photo).
- Keep it firmly against the backstop and keep it moving while you're making the score line.
- This will take practice if you've never used a cutter to cut glass before. Only go round on

STEP THREE: HEAT&COOL THE CUTTING LINE

Heating the score over boiled water and cold water alternately bathe three times or more ..

STEP FOUR: SMOOTH THE CUTTING LINE

smooth the cutting line by polishing paper and powder
